SUMMARY

Developer with 5+ years of commercial experience: 4 years of product frontend (React, Vue) and 14 months of HTML5 playable ads at Kourion Studio (Cyprus, remote).

Shipped around 60 commercial playables in 14 months — up to 10 a month — in Cocos Creator and PixiJS (TypeScript/JavaScript), 2D and 3D. I own a playable end to end: gameplay, physics, UI, animation, assets, performance, and network-ready builds. A working draft usually takes about two days.

Before playables: production web applications in React and Vue — responsive UI, client logic, REST APIs, refactoring, and support.

AI-assisted development is part of my production workflow (task spec, faster implementation, review, debugging). Software development is the core skill.

SKILLS

Playable ads: HTML5, 2D and 3D playables, gameplay and physics (Box2D), build size, performance, asset loading, single-file packed builds

Ad networks: AppLovin, Google, Mintegral, TikTok, Moloco, Facebook, Unity, ironSource

Engines and frameworks: Cocos Creator 3.8 and PixiJS 8 + GSAP (commercial playables), Godot / GDScript (personal projects)

Frontend: JavaScript, TypeScript, React, Vue, HTML, CSS/SCSS

Tooling: Git, Webpack/Vite, Node.js build scripts, Figma

Markets: playables for Europe and Asia, localized copy and geo-aware currency

Languages: English — fluent; Russian — fluent

EXPERIENCE

Playable Ads Developer — Kourion Studio

Cyprus · Remote
September 2025 – Present (14 months)

- Shipped around 60 commercial HTML5 playable ads in 14 months (up to 10 a month), working independently from brief to network-ready build.
- Built 2D and 3D gameplay in Cocos Creator 3.8 (TypeScript) and PixiJS 8 with GSAP: card and slot mechanics, crash and stacking games, hidden-object scenes, deduction boards, ragdoll physics, runners.
- Delivered single-file packed builds for AppLovin, Google, Mintegral, TikTok, Moloco, Facebook, Unity, and ironSource within the size and API requirements of each network.
- Produced one-tap, two-tap, and full variants, reskins, and localized versions from a single codebase through config-driven builds.
- Assemble a playable draft in about two days, then iterate to a production build.
- Use AI-assisted development to speed up implementation; architecture, debugging, and shipping stay in my hands.

Frontend Developer — Walnut Team

walnut.team · Product company
May 2022 – August 2025 (3 years 4 months)

- Developed and supported client-side web applications in a product team alongside backend, design, and product.
- Implemented features from spec: interactive UI, REST API integration, bug fixing, optimization, and refactoring.
- Public work:
  - VkusVill Food: food.vkusvill.ru
  - VkusVill Prazdnik: prazdnik.vkusvill.ru

Frontend Developer — TheMembers

themembers.com
March 2022 – April 2022

- Built landing pages from design: CSS animation, Bootstrap, module integration, and bug analysis.

Frontend Developer — MAXIMUM EDUCATION

maximumeducation.com
September 2021 – February 2022

- Developed company sites (maximumtest.ru, maximumeducation.com), landing pages, blog, and magazine with Vue in a Scrum team; CRM/CMS integration, responsive UI.

EDUCATION

Yandex Practicum — Frontend Developer program
September 2020 – August 2021
HTML, CSS, SCSS, JavaScript, Vue, React, Git, Node.js, MongoDB

Russian State University of Tourism and Service, Moscow
Tourism, 2018

Moscow Technical University of Communications and Informatics
Cybernetics and Information Security (incomplete), 2010
